Hi, welcome to our NETS150 Project: Night in New York! We recommend using Eclipse to set up our project, but any IDE should work!

1. We recommend using JavaSE-1.8 for this project!
   a. Once you import the files, please right click on the .jar file and Build Path

   b. Then you should be all set up
2. Then right click on GraphicMain.java and click Run As → Java Application

3. This should appear!

Instructions   ✕

ⓘ Hi! Welcome to our App: Perfect Night in NYC
   Let us first ask some of your preferences!

    OK

● ● ●   **Perfect Night in NYC**

Please select your favorites for each category!

Food Categories: Thai   Mexican   Italian   Korean   Chinese   American

Activities Categories: Arcade   Karaoke   Billiards   Bowling

Submit

4. Choose the categories for events you want to attend! Make sure you select at least one food and one activity. You'll be guaranteed to get an itinerary of four events!

5. You'll then receive an itinerary. Enjoy your trip in New York!

For example, if you chose every option, you may be prompted:

Itinerary

Here's your optimal route for New York:
First, you'll go to Chu–Ros Thai
Then, you'll go to Eastside Billiards – CLOSED
After, head on over to Rao's
And, end your night at Joe's Garage Bar

OK

Note that this is the shortest path between all of the destinations, rather than a non-optimal path such as Chu-Ros -> Joe's -> Rao's -> Eastside Billiards or any other activity starting at Chu-Ros.
